WHO ARE WE

Michael Sinn: Junior full stack Web developer at The University of Toronto

Trishane w: Junior full stack Web developer at The University of Toronto

Imanuel: Junior web developer at the University of Toronto

OUR EXPERIENCE

Michael Sinn: 12 years coding experience, 4 years in JavaScript.

Trishane w : 2 years of coding experience started learning CSS HTML and JS 1 month ago

Imanuel: 3 months experience with HTML and CSS, 3 weeks experience with JavaScript

OUR GOALS

Michael Sinn: Goals are to found a tech company

Trishane w: Wants to create an app or website that many people find useful and use daily

Imanuel: To find a secure position in a web development company

WHY WE CHOSE CODE

Michael Sinn: I like making things and it's fun working through coding problems

Trishane w: Has always been interested in technology and enjoys problem-solving so coding seemed really interesting to him

Imanuel: to be able to create something that is difficult to understand

HOW WILL WE ACHIEVE OUR GOALS?

Michael Sinn: Gain experience through working in a professional environment in order to learn/save enough to be able to go out on my own and develop projects that I think are fulfilling and meaningful

Trishane W: " through the skill I will learn and develop in the boot camp, I will be able to achieve my goals"

Imanuel: By graduating the full stack web development course and working with the career services, find a good company for me

OUR

CONCEPT

Description

As technology continues to advance, travelers of all kinds have become increasingly more dependent on travel related websites to gain valuable information regarding their desired destination. Campers in specific rely on this data to evaluate which campsite is most suitable for themselves, and those they are camping with. Camp JRNL gives prospective campers the capability to retrieve this crucial information, allowing them to make informed decisions. Furthermore, Camp JRNL allows users to submit information on campsites they have reviewed, ultimately providing more data to new users planning their next trip! Camp JRNL serve reference for current and prospective campers.
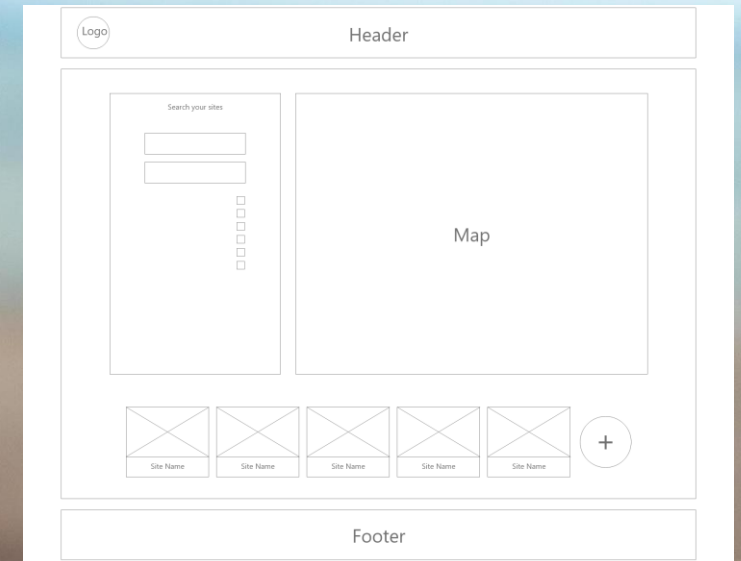

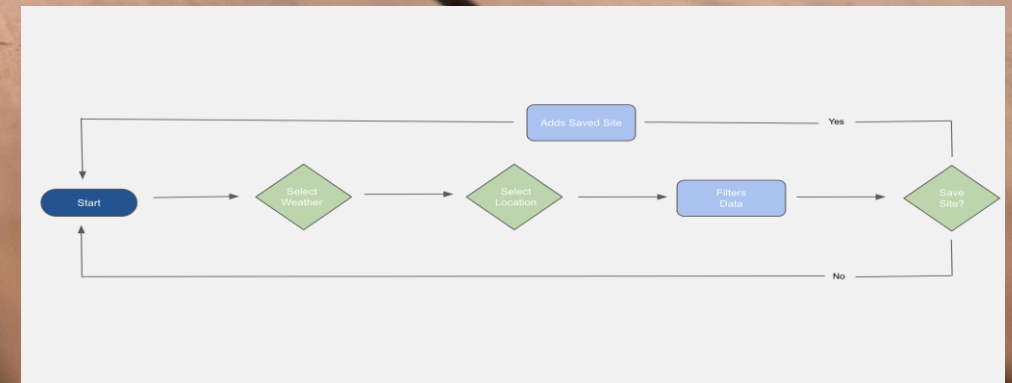

OUR CONCEPT

Motivation for this website

Wire Frame

To be able to create a website that makes it fast and easy for customers to find the perfect location that fits their family's preferences, where they can find peace and be one with nature.

Work Flow Chart

User story

AS A USER I would like to find a website that locates high rated campsites near me that fits all of my families and friends criteria

SO THAT I CAN Focus more on organizing essential equipment instead of wasting precious time finding a good place for me and my family

THE PROCESS

The technologies used

-GitHub

-Git bash

-Vs code

-HTML

-CSS/Bulma

-JavaScript

-Third-party Google Map and weather API

Tasks and roles of the team

Michael: added most of the JavaScript and dealt with the API problems as they arose

Trishane: added and configured the navigation bars that will help the user search for what they want, also added CSS and HTML to the main page

Imanuel: created the info page and added some CSS and HTML to the main page

CHALLENGES

SUCCESSES

It was difficult to figure out how we can set up the API Google Map

But Michael found out that you need to make an external JavaScript file and put the API link in there

We couldn't figure out why the links on the

top of the page or not working

But we found out that it has something to do with the background image and the opacity set on it

Couldn't figure out why one of the pushes we

did, keep saying that there was a failed

checkpoint

But we found out that it had something to do

with the google API and Michael resulted

FUTURE
OF THE
CAMPING JOURNAL

Be able to check campsite by distance and by name
